In algorithmic information theory (a subfield of computer science and mathematics), the Kolmogorov complexity of an object, such as a piece of text, is the length of the shortest computer program (in a predetermined programming language) that produces the object as output. It is a measure of the computational resources needed to specify the object, and is also known as descriptive complexity ...

In computability theory and computational complexity theory, a reduction is an algorithm for transforming one problem into another problem. A reduction from one problem to another may be used to show that the second problem is at least as difficult as the first. Intuitively, problem A is reducible to problem B if an algorithm for solving problem B efficiently (if it existed) could also be used ...

Welcome to ContradictionsintheBible.com!! I am a biblical scholar and author. And although formally trained in the New Testament and early Christianity (Ph.D.), I have become increasingly interested in the compositional history of the Hebrew Bible, especially the Pentateuch, for going on a decade now. In January 2013 I started posting 1 contradiction a day, with the aim of working through the ...

En mathématiques, la théorie du chaos étudie le comportement des systèmes dynamiques très sensibles aux conditions initiales, un phénomène généralement illustré par l'effet papillon. Pour de tels systèmes des différences infimes dans les conditions initiales entraînent des résultats totalement différents, rendant en général toute prédiction impossible à long terme.
