Control Design Techniques in Power Electronics Devices

between conflicting requirements. The design of a control system involves the following steps: 1. Characterize the system boundary, that is, specify the scope of the control problem and of the system to be controlled. 2. Establish the type and the placement of actuators in the system, and thus specify the inputs that control the system. 3.

Design Methods for Control Systems - Universiteit Twente

Nonlinear control design methods represented include: exact feedback linearization, input-output linearization, differential flatness, generalized PID control and, again, passivity-based control. This monograph will be of interest to researchers in power systems and their related control problems.

Control Design Techniques in Power Electronics Devices

Control Design Techniques in Power Electronics Devices deals specifically with control theories relevant to the design of control units for switched power electronics devices, for the most part ...
