Deviations from ideal transformer. The ideal transformer model neglects the following basic linear aspects of real transformers: (a) Core losses, collectively called magnetizing current losses, consisting of. Hysteresis losses due to nonlinear magnetic effects in the transformer core, and; Eddy current losses due to joule heating in the core that are proportional to the square of the ...

Transformer oil, a type of insulating and cooling oil used in transformers and other electrical equipment, needs to be tested periodically to ensure that it is still fit for purpose. This is because it tends to deteriorate over time. Testing sequences and procedures are defined by various international standards, many of them set by ASTM. Testing consists of measuring breakdown voltage and ...
