A mouthguard is a protective device for the mouth that covers the teeth and gums to prevent and reduce injury to the teeth, arches, lips and gums. A mouthguard is most often used to prevent injury in contact sports, as a treatment for bruxism or TMD, or as part of certain dental procedures, such as tooth bleaching or sleep apnea. Depending on application, it may also be called a mouth protector ...

Q: What about our fangs? A: What about gorilla fangs? Impressive as its teeth may be, the mountain (as well as lowland) gorilla is a vegetarian and insectivorous animal. What we refer to as human "fangs" are pitiful representations of their kind when compared to those of other animals (i.e. bears, raccoons).

Another classification system often taught in U.S. dental schools is known as Pell and Gregory Classification. This system includes a horizontal and vertical component to classify the location of third molars (predominately applicable to mandibular third molars): the third molar's relationship to the occlusal plane being the vertical or x-component and to the anterior border of the ramus being ...
