Stock Photon Storm PTG = 25 ft ATG = 30 ft Modded Photon Storm (12.6 Volts & Trigger Activated Power On) PTG = 50 ft ATG = 60 ft Note that the tests were done under controlled conditions with custom calibrated foam darts. The results are sample estimates for reference (your results may differ depending on materials and mod techniques used).

Photon model of light There are two models of light that are useful to explain various experiments. One model of light describes it as an electromagnetic wave made up of a propagating wave made up of an oscillating electric field and oscillating magnetic field (in a plane perpendicular to the electric field). The color of light depends on its

Figure 1. EM self-field model of radiated photon moving in a straight path along the axis of a special relativity frame of reference. In general frames of relativity, the path is curved, and this curved path obeys EM self-field theory for moving charged and dipolar particles [Fleming 2003b]. Figure 2. The EM self-field model of a stationary photon.

Jonathan M. Butterworth Structure of the Photon of the cross section is made as a function of the four-momentum transfer at the lepton vertex (Q^2) and/or the Bjorken scaling variables x and y . This allows the extraction of structure functions, defined in exactly the same way as for a nucleon.
